

STANDARDS OF CARE for NON CONVENTIONAL SURGE CAPACITY LEVEL Due to COVID 19 Pandemic

As a healthcare provider and community leader, Monterey Park Hospital (MPH) and its staff shall make every effort to provide emergent and acute care services (safely and within the scope of its service) to the community during times of medical crisis. MPH shall work directly with the LA County Emergency Medical Alert Center (MAC), neighboring hospitals and the LAC-USC Disaster Resource Center and the City of Monterey Park Emergency Operations Center (EOC), if available, to plan and coordinate medical disaster response, operations and recovery activities, during times of medical crisis.

The scope of the standards of care is to guide the hospital in identifying and responding effectively to any event that presents the potential for a large number of persons seeking emergent and/or acute medical assistance, at the location of the hospital, or the defined hospital zone, exceeding the conventional capacity of the hospital. The standard of care detailed below consists of a number of procedures designed to identify and respond to those situations. The standards of care is divided into three categories such as, conventional, contingent and crisis in accordance with definitions offered by California Pandemic Crisis Care Guidelines published on June 2020. The program is aimed to assure fulfillment of the medical needs of patients while being in compliance with applicable codes and regulations and through efficient use of resources. These standards of care will be complementing the hospital's current emergency operations plans.

If the facility needs to move to Crisis Category, MPH is required to notify by email AND phone the following agencies:

Los Angeles County Department of Public Health Emergency Desk

DEFINITIONS:

Conventional: Usual resources and level of care provided. For example, during a surge in patients, maximizing bed occupancy and calling in additional staff to assist.

Contingency: Provision of functionally equivalent care that may incur a small risk to patients. Care provided is adapted from usual practices. For example, boarding critical care patients in post-anesthesia care areas using less traditional, but appropriate resources.

Crisis: Disaster strategies used when demand forces choices that pose a significant risk to patients but is the best that can be offered under the circumstances. For example, cot-based care, severe staffing restrictions, or restrictions on use of certain medications or other resources.

Indicator: is a “measurement or predictor of change in demand for health care services or availability of resources. An example of an indicator is a report of several confirmed cases of COVID-19 in the community by the local health department.

Trigger: is a “decision point about adaptations to health care service delivery” that requires specific action.

BACKGROUND:

In early fall of 2019, a novel influenza virus was detected in the United States. The virus exhibited twice the usual expected influenza mortality rate. As the case numbers increased, a nationwide pandemic was declared. The Centers for Disease Control and Prevention (CDC) identified the at-risk populations as school-aged children, middle-aged asthmatics, all smokers, and individuals greater than age 62 with underlying pulmonary disease. Definitive preventive and curative modalities are still under research, development, and implementation. The longstanding impact of the unprecedented pandemic forced the hospitals to exceed surge capacity levels, causing significant challenges on various resources. In responding to the challenges posed by the pandemic, MPH follows all national, state and local regulations and guidance and works in close relation with local public health department.

Indicator Category	Contingency	Crisis	Return Toward Conventional
Surveillance data	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Pandemic or epidemic (e.g., SARS Cov2) virus detected <input type="checkbox"/> Regional/community emergency department (ED) volume, ED wait times/boarding times <input type="checkbox"/> Regional/community hospital capacity or subset data, such as available intensive care unit (ICU) beds <p>Triggers:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Receipt of health alert triggers group notification by receiving infection prevention personnel <input type="checkbox"/> “Full capacity” plan initiated when ED wait times exceed 5 hours/day <p>Tactics:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Communication/coordination with stakeholders/coalition partners <input type="checkbox"/> Change hours, staffing, internal processes in accord with facility plans <input type="checkbox"/> Assess predicted impact on institution <input type="checkbox"/> Partial or full activation of incident command system/hospital command center 	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Epidemiologic projections will exceed resources available <p>Crisis Triggers:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Epidemiology projections exceed surge capacity of facility for space or specific capability (e.g., critical care)—see below space and supply considerations, as triggers should be based on depletion of available resources 	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Surveillance streams show decline in activity <input type="checkbox"/> Improvement in regional/community ED volumes/wait times/boarding times <p>Triggers:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Not specified for predictive data, will adjust based on specific actionable data <p>Tactics:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Stand down incident management (scaled) <input type="checkbox"/> Lengthen duration of planning cycles <input type="checkbox"/> Reduce/deactivate regional information exchange <input type="checkbox"/> Facility practices revert toward conventional <input type="checkbox"/> Revert to normal system monitoring
Staff/Workforce	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Increasing staff absenteeism <input type="checkbox"/> Specialized staff needed (nurses) for incident patients <input type="checkbox"/> Staff work action anticipated (e.g., strike) <input type="checkbox"/> High patient census <input type="checkbox"/> Staffing hours adjustment required to maintain coverage <input type="checkbox"/> Staffing supervision model changes required to maintain coverage <p>Triggers:</p>	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Increasing staff requirements in face of increasing demand <input type="checkbox"/> Contingency spaces maximized <input type="checkbox"/> Contingency staffing maximized <p>Crisis Triggers:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Unable to safely increase staff to patient ratios or broaden supervisory responsibilities 	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Staff impact is reduced, schools back in session, damage to community mitigated <input type="checkbox"/> Staff absenteeism reduced <input type="checkbox"/> Specialty staff obtained or demand decreased <p>Triggers:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Staff to patient ratios as per state law achieved on

	<ul style="list-style-type: none"> <input type="checkbox"/> Normal staff to patient ratios exceeded <input type="checkbox"/> Specific staff expertise demands exceeded (e.g., nurses) <p>Tactics:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Assess likely impact on facility <input type="checkbox"/> Hold staff (mandatory overtime) <input type="checkbox"/> Change hours, staffing patterns <input type="checkbox"/> Change staff to patient ratios <input type="checkbox"/> Specialty staff provide only specialty/technical care, while other staff provide more general care <input type="checkbox"/> Callback, obtain equivalent staff from coalition, hiring administrative staff <input type="checkbox"/> Change charting responsibilities <input type="checkbox"/> Curtail nonessential staffing (cancel elective cases) <input type="checkbox"/> Provide support for staff (and their families as required) to help them continue to work and provide quality care (e.g., stress “immunization,” rest periods, housing support) 	<ul style="list-style-type: none"> <input type="checkbox"/> Lack of qualified staff for specific cares—especially those with high life- safety impact <p>Tactics:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Tailor responsibilities to expertise, diverting nontechnical or non- essential care to others <input type="checkbox"/> Recruit and credential staff from volunteer (Medical Reserve Corps [MRC], Emergency System for Advance Registration of Volunteer Health Professionals [ESAR-VHP]) or federal sources (Disaster Medical Assistance Team [DMAT], other National Disaster Medical System [NDMS] source, etc.) <input type="checkbox"/> Establish remote consultation of specialized services such as telemedicine, phone triage, etc., if possible <input type="checkbox"/> Evacuate patients to other facilities with appropriate staff available 	<p>medical floor</p> <p>Tactics:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Shorten shift lengths <input type="checkbox"/> Adjust staff to patient ratios toward normal <input type="checkbox"/> Transition toward usual staff—releasing less qualified staff first <input type="checkbox"/> Resume care routines <input type="checkbox"/> Resume administrative duties
Space/Infrastructure	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Increased ED volumes <input type="checkbox"/> Increased inpatient census <input type="checkbox"/> Increased pending admits/ED boarding 	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Inpatient/outpatient contingency spaces maximized or near-maximized <input type="checkbox"/> Escalating or sustained 	<p>Indicators:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Favorable epidemiologic curves <input type="checkbox"/> Restoration of critical system function
